

ElastAbrasion

Elastomeric abrasion tester

Dynamic ElastAbrasion
for efficient, precision
elastomeric abrasion
testing

Tested and approved by
Volkswagen

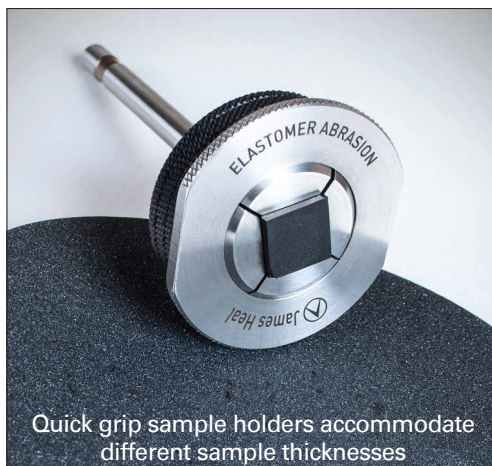

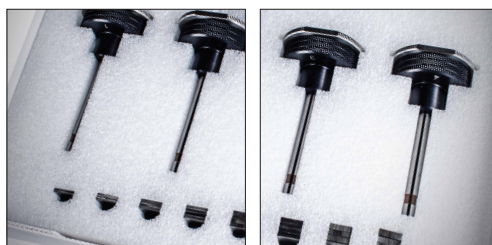

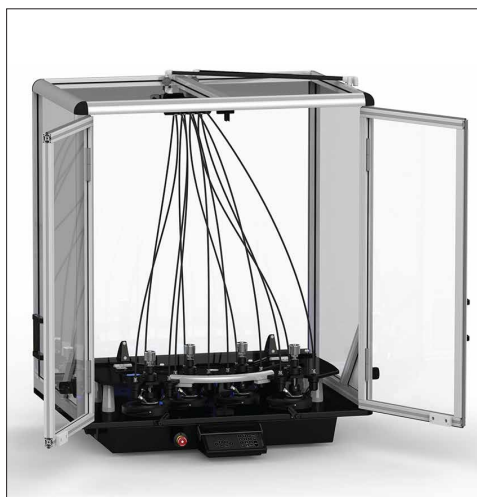

Compliant with Standard PV3984

ElastAbrasion

PRECISION ABRASION ELASTOMERIC TESTER

Elastomeric abrasion resistance testing of materials including seals, engine mounts, rubber boots for linkages, tyres and mats.

Quick grip sample holders accommodate different sample thicknesses

KEY BENEFITS

Higher Efficiency

Higher efficiency in cost and time in comparison to DIN abrasion tester.

Authentic Results

The multi-directional abrasion closely reflects the abrasion of elastomeric components when in situ within the vehicle.

Clean Working Area

Enclosed cabinet to contain loose particles, keeping the laboratory clean and the operator safe from inhaling undesirable elastomeric materials.

Higher Productivity

This instrument tests four samples simultaneously offering substantial time savings and increased productivity.

Full Flexibility

Ability to change number of lissajous cycles, the speed and different grades of abrasive paper and other mediums that interact with elastomeric components.

Consistent Repeatable Results

Special lissajous pattern with high and low velocities which create consistent and repeatable results.

Dimensions (mm)

Height:	1191
Width:	1187
Depth:	845

Efficient Operation

Intuitive interface outside of cabinet enables quick and easy set up.

Air Cleaned

Air blast nozzles to continually clear debris from the abrading tables.

Controlled Air Supply

Automatic controller switches air on during testing and off at the end for efficient use of compressed air.

Adaptable Pressure

Different weights can apply pressure to the sample enabling different types of elastomeric products, of different thicknesses, to be tested.

Easy Access

Hinged top plate allows easy access to all testing stations.
