

Titan

Universal Strength Tester

Tension and compression
testing with capacity to
accommodate tests up to
5000 Newtons

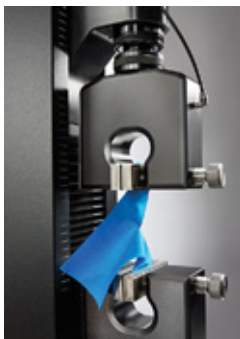

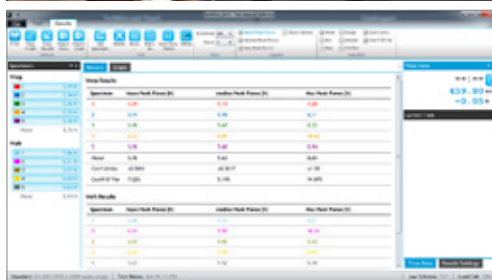

5kN

Available with
TestWise
software

Substantially increased tension and compression capacities and a new enhanced range of tooling, intuitive software and automated processes.

KEY BENEFITS

INCREASED STRENGTH - 5kN

Increased strength capacity - up to 5000N tension and compression enabling laboratories to increase the number and scope of tests offered.

FIVE NEW TOOLS

The extensive range of tools and specimen grips has been increased including tools and grips to test Elastane, Rivets, Studs, Press studs, Velcro and leather products.

AUTOMATIC PARAMETERS SETUP

TestWise Software automatically sets up the test parameters of the selected Standard. Time to start the test is reduced, and as the parameters are preloaded, human error is eliminated. Greater accuracy and reliability is achieved.

AUTOMATIC JAW SEPARATION

The jaw separation is automatic and the distance is calibrated. The process is repeatable and precise as human error is eliminated from this operation.

QUICK CHANGE LOAD CELLS

The potential to increase efficiencies and laboratory throughput.

QUICK CHANGE JAW FACE

Changing the jaw faces is tool free and is a very simple and efficient process.

'SMART' BUTTON

Sample loading and the test start can be actioned directly at the instrument using this Smart button, eliminating the need to constantly return to a PC or Laptop.

SOFT CLOSE JAWS

When loading a sample, the jaws will initially apply very light pressure, sufficient to grip the sample but not to cause damage to fingers.

PRESSURE SENSOR

A pressure sensor on the bottom grip connection will automatically stop the instrument in the event of a collision between the top and bottom grips.

CLEAN WORKING ENVIRONMENT

All the pneumatics, electronics, foot switch cabling, USB port and power supply are integrated into the instrument.
